Hiring Manager
OnSemi

5th August 2025

Subject: Junior AI and Data Science Engineer

Dear Hiring Manager,

I'm Amith, a recent AI/ML graduate from Bengaluru. Honestly, when I saw your Junior AI and Data Science Engineer role, I got pretty excited. The idea of working on AI solutions that drive change in automotive electrification and sustainable energy is the kind of impactful work I've been dreaming about.

I've been building AI systems throughout my college journey, and I think my projects align well with what you're looking for. My biggest project, EchoSight, is an AI-powered wearable for visually impaired users that combines face recognition, object detection with YOLOv4-tiny, and real-time processing. Getting all these models to work together reliably taught me so much about the entire ML pipeline, from data preprocessing to model deployment and monitoring.

I also built an AI Answer Sheet Evaluation Bot using Google Gemini API that achieves 90%+ accuracy in evaluating handwritten student responses. This project was all about handling messy, real-world data and using advanced prompt engineering to get consistent results.

Working with OCR and getting the AI to understand different handwriting styles taught me a lot about data cleaning and preprocessing skills, which I know are crucial for any data science role.

I'm comfortable with the entire tech stack you mentioned - Python (NumPy, pandas, scikit-learn), TensorFlow, SQL, and data visualization. I've used these tools extensively in my projects, not just in assignments.

I've been following the work OnSemi is doing in the automotive and industrial space, and it's fascinating how you're using AI to solve complex real-world problems. Beyond the technical skills, I bring genuine enthusiasm for AI and a strong problem-solving mindset. I'm someone who stays curious about the latest trends in AI and data science, and I love documenting my work clearly so others can build on it. My experience has taught me that the best AI solutions come from understanding the business problem first and then building the right technical solution.

I'm genuinely excited about the possibility of joining OnSemi and contributing to the incredible work you're doing. The opportunity to work on AI solutions that drive real business insights while also contributing to a more sustainable future - that's exactly what I'm looking for in my career.

Thanks for considering my application! I'd love to chat more about how I can contribute to your team's success.

Warm regards,

Amith M Jain
