EDUCATION

Global Academy Of Technology <i>Bachelor of Technology — Computer Science Engineering</i>	Dec. 2021 - June 2025 CGPA - 8.18
Sri Kumaran Children's Home PUC <i>Pre-University Course, K'taka PUC - Biology</i>	May. 2019 - May. 2021 CGPA - 9.1
Sri Kumaran Children's Home <i>Class X, K'taka State Board</i>	June. 2009 - March. 2019 CGPA - 9.3

EXPERIENCE

Software Intern <i>Epic Minds LLC</i>	June 2025 – Present Bengaluru
- Developed an LLM-powered Mermaid.js diagram generator supporting multiple types (Pie, ER, State, Class, Flowchart, Gantt, Sequence) from natural language prompts. - Built an AI-driven proposal automation bot that parses client documents, queries users based on a custom structure, and generates proposals in Markdown format. - Designed a website analyzer using Streamlit for UI and a custom backend that crawls websites to generate depth-wise page stats, image/PDF counts, sitemaps, and external links. - Implemented a PDF embedding pipeline that chunks documents, embeds them using vector models, stores them in Qdrant, and logs metadata in PostgreSQL for semantic retrieval.	
Engineering Intern <i>Hindustan Aeronautics Limited (HAL)</i>	Oct. 2024 – Nov. 2024 Bengaluru
- Developed a secure, .NET-based web platform for HAL employees to manage division-specific data, increasing data accessibility by 40% and operational efficiency by 25%. - Integrated C and .NET backend with Oracle SQL, enabling seamless user authentication and secure database connections, reducing data retrieval time by 30%. - Designed a responsive HTML/CSS frontend with role-based navigation, enhancing user experience and streamlining data processes, leading to a 20% improvement in task completion rates.	

ACADEMIC PROJECTS

Decentralised Marketplace for AI Models <i>React.js, Firebase Authentication, Firebase Firestore, IPFS, @iota/sdk, Razorpay API</i>	[2025]
- Engineered a decentralized AI model marketplace integrating IPFS for distributed storage, Firebase Auth/Firestore for secure user management, and mock IOTA DAG for metadata immutability. - Implemented a credit-based transaction system via Razorpay, with React.js frontend and Node.js backend, enabling verifiable model licensing, ownership, and access control.	
Automated Vehicle Maintenance Predictor <i>Python, Machine Learning – K-Means Clustering, XGBoost, SVM, Random Forest, Scikit-Learn</i>	[2024]
- Developed a predictive maintenance model leveraging regression, classification, and time series forecasting, achieving a 20% reduction in unexpected vehicle breakdowns. - Performed data analysis on historical vehicle records to identify trends, optimize service schedules, and reduce operational costs by 15%.	

Traffic Monitoring Using YOLO and DeepSORT

Python, YOLOv8, OpenCV, DeepSORT

[2024]

- Designed and implemented a traffic monitoring system using YOLOv8, achieving real-time detection and tracking of vehicles, pedestrians, and cyclists with 95% accuracy.
- Optimized the system for deployment in high-density traffic environments, enabling scalable, real-time analytics.

Mental Health Medical Chatbot

Python, Vectorization, Cosine Similarity, NLTK

[2024]

- Developed a conversational AI chatbot using vector space modeling and cosine similarity to retrieve contextually accurate mental health responses.
- Applied NLP techniques including tokenization and preprocessing to enhance response accuracy and semantic understanding.

COURSES AND CERTIFICATIONS

- Python for Data Science and Machine Learning
- Machine Learning Foundation Certification
- Project Management

TECHNICAL SKILLS

Languages: Python, C, SQL, HTML/CSS, R

Libraries: pandas, NumPy, Matplotlib, Keras, Scikit-Learn

SOFT SKILLS

Project Management, Communication, Problem-Solving, Adaptability, Teamwork, and Collaboration
